## Drugs of Abuse

www.dps-instruments.com

Drug screening of employees is increasing around the world. Many employers have been forced to administer programs due to the high costs of drug related work incidents. Additionally, a recent study had shown that about two-thirds of patient visits to hospital emergency rooms for drug abuse would have been misdiagnosed without lab testing. Many times doctors are not sure what patients have taken, and the same holds true for many DOA cases. The only way to determine what a patient may have taken is by drug testing. The DPS Drugs of Abuse GC Systems are configured with the latest designed high resolution capillary column and the sensitive FID detector to quickly detect these compounds. The Series 600 GC is for analyses in the lab, or use the Portable Companion 1 GC Systems for analyses right where the samples are taken. The fast heating and rapid cooling column oven in every DPS GC vastly increases your sample throughput. The fully integrated Drugs of Abuse GC Analyzer Systems are small and lightweight and all DPS systems are modular for expandability, upgrades, and easy service.

### Available Configurations Include:

- 600-C-063 - Series 600 Drugs of Abuse GC Analyzer (FID, 30m)
- 500-C-063 - Companion 1 Portable Drugs of Abuse GC Analyzer (FID, 30m)
